

Utkarsh Pardhi

Software Engineer | Java · Spring Boot · REST APIs · React · Full-Stack Development

pardhiutkarsh801@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Education

Master of Computer Applications (MCA) — CGPA: 8.42 / 10.0 *Graduated 2025*

Shri Ramdeobaba College of Engineering and Management, Nagpur, India

Bachelor of Computer Applications (BCA) — 75% *Graduated 2023*

D.B Science College, Gondia, Nagpur University

Technical Skills

Languages: Java, SQL, Python, JavaScript, HTML, CSS

Frameworks & Technologies: Spring Boot, Spring Security (JWT/RBAC), Spring Data JPA, Hibernate, RESTful APIs, React, Vite, Maven

Databases & ORM: PostgreSQL, MySQL, MongoDB, JDBC, JPA/Hibernate

Tools & Platforms: Git, Postman, IntelliJ IDEA, AWS Cloud, Swagger UI (OpenAPI)

Core Competencies: Microservices Architecture, REST API Design, Exception Handling, OOP, SOLID Principles, Database Design

Projects

Banking Application (FinGo) *Sep 2025*

Spring Boot · Spring Security · JWT · PostgreSQL · React · Vite · Swagger UI · Render · Vercel

Backend: [banking-application-springboot.onrender.com](#) | Frontend: [banking-app-frontend-three.vercel.app](#) | [GitHub](#)

- Developed and **deployed** a full-stack banking application to production — Spring Boot backend (Render) and React frontend (Vercel) — with RESTful APIs for account creation, deposits, withdrawals, balance inquiry, and transaction history with complete JSON validation.
- Implemented JWT-based authentication and role-based access control (RBAC) using Spring Security, designing a stateless security architecture; integrated Swagger UI (OpenAPI) for interactive API documentation with Bearer token authorization.
- Built React admin dashboard (Vite, Bootstrap, Chart.js) with nested routing, dark mode toggle, real-time transaction history via Axios, and summary cards — delivered complete frontend-backend integration independently.
- Designed custom exception handling framework (`@ControllerAdvice`, `AccountNotFoundException`) ensuring consistent error responses across all API surfaces with appropriate HTTP status codes (200, 400, 404, 500).

Airport Management System *Oct 2025*

Spring Boot · Spring Data JPA · PostgreSQL · RESTful APIs

- Built complete RESTful backend with 15+ API endpoints for Airlines, Flights, Seat Bookings, and Passengers — implemented layered Spring architecture (`@RestController`, `@Service`, `@Repository`) with DTO pattern and full CRUD operations.
- Designed automated seat booking engine with multi-layer business logic to prevent overbooking, auto-allocate available seats, and validate requests — resolving concurrency edge cases through structured exception handling.
- Modelled PostgreSQL database with JPA entity relationships (`@OneToMany`, `@ManyToOne`) across Airlines-Flights-Bookings; implemented global exception handling with `@ControllerAdvice` and structured project across controller, service/impl, repository, DTO, mapper, and exception packages.

Employee Management System *Mar 2025*

Java · JDBC · PostgreSQL · MVC Architecture

- Built console-based CRUD application with MVC architecture (Controller, DBUtil, Entity) for employee records including add, view, update, delete, and department-based search — used `PreparedStatement` for all SQL operations to prevent injection attacks.
- Implemented custom logging framework using Java Logging API to track all database operations, transactions, and errors at different severity levels (INFO, SEVERE); applied try-with-resources pattern for safe database connection management.

Certifications

- AWS Academy Graduate — Cloud Foundations · AWS Academy Graduate — Machine Learning Foundations
- Microsoft Power BI Desktop for Business Intelligence · Google Prompting Essentials (Coursera)
- Introduction to Internet of Things — IIT Bombay via Coursera · Introduction to Networking and Cloud Computing
- Data Analysis in SPSS: Inferential Statistics
